

# May Meet-up

High Country Angular

# Introduction

- Why do we need another meet-up?
- What's so great about Angular?
- Organizers
  - Wes Grimes
  - Chris Hampton
- Sponsored by Samaritan's Purse

# Vision Statement

- High Country Angular is a group of tech enthusiasts, web designers, software developers and engineers, gathering together on a regular basis to share knowledge, ideas, and lessons learned in working with the Angular framework.
- We are working hard to create a ***culture of honor*** where questions big and small from beginners to experts are treated with the same respect.

# Meetup Schedule

- 3rd Monday of Every Month
- Future Location @ Samaritan's Purse IHQ
- Check [meetup.com](https://www.meetup.com) for schedule updates and changes
- Submit topics for discussion via Twitter  
@ngHighCountry #meetup

# Social Media

**@ngHighCountry**

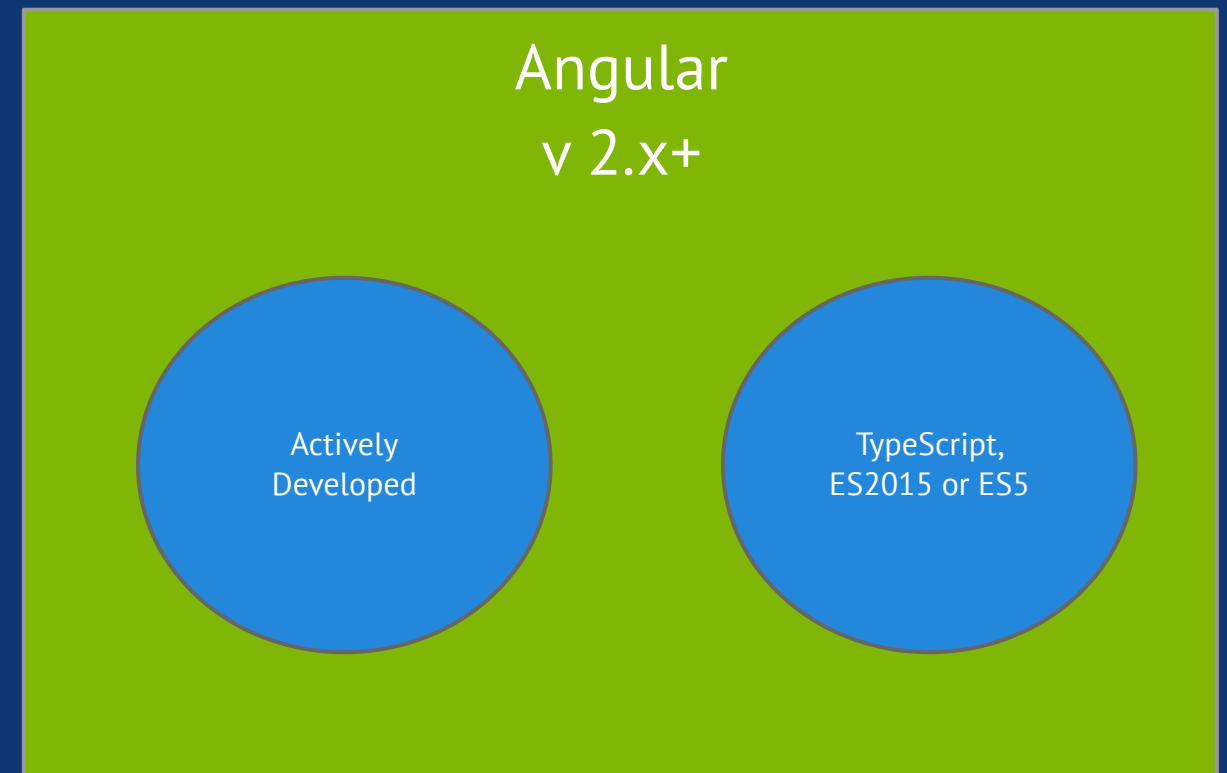

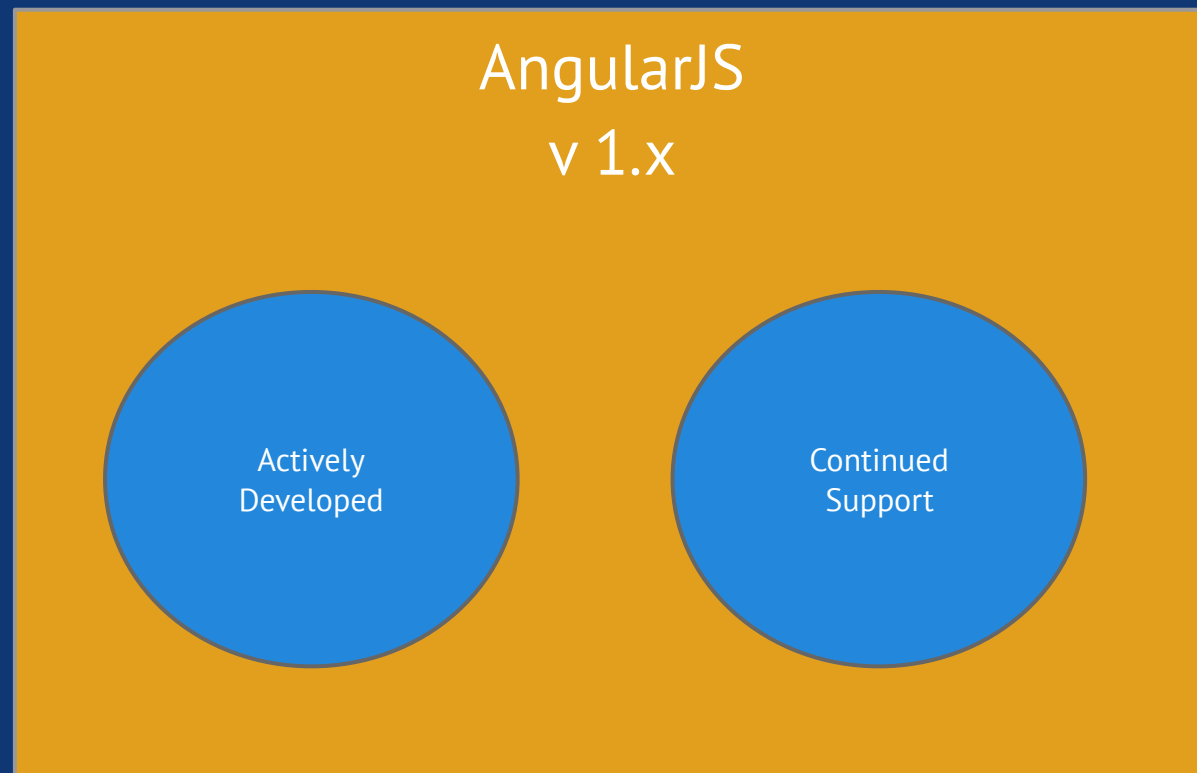

# Angular Basics

- We're going to build a Chuck Norris Joke Board
- By the end you'll be able to...
  - Use Stackblitz to create/develop a basic Angular App
  - Understand building blocks of a basic Angular App
  - Request data from external services using HttpClient

# Angular Versions

**AngularJS** is planning one more significant release, version 1.7, and on July 1, 2018 it will enter a 3 year Long Term Support period. - Angular Team, Jan 2018

# Angular Overview

Modules

Components

Decorators

Languages  
(TypeScript,  
ES2015+, ES5)

Dependency  
Injection

Services

Data Binding

Performance

# The Big Picture

**WHEN CHUCK NORRIS THROWS  
EXCEPTIONS**

**IT'S ACROSS THE  
ROOM**

memegenerator.net

**CHUCK NORRIS WRITES CODE THAT OPTIMIZES  
ITSELF**

# Typescript

- The future of JavaScript is ES2015
  - Major update to the JavaScript language
  - Modules, classes and more
  - Will help you align with Angular
- TypeScript builds on top of ES2015

# Typescript

<https://www.typescriptlang.org/play/>

# Typescript Compilation

# Typescript Classes

- TypeScript/ES2015 supports classes:
  - Define constructors
  - Define properties
  - Support for "inheritance" (uses prototyping)
  - Shortcut function names
  - Encapsulation of code!

# Typescript Arrow Functions

- Cleaner syntax
- Easier nesting
- “Fat arrow” =>
- Function myFunction(inputVar)

# Typescript Template Strings

- Supports multi-line strings
- Allow variables and expressions to be embedded in string literals using `${expression}`
- Use the ``` character to start and end a string
- Clean up situations where multiple strings are concatenated

# Let's Get Coding...
